

Supplier Quality Engineer (f/m/d)

At midge medical, we're reimagining the way healthcare systems work. You'll have the chance to be part of that change within a diverse and fast-growing team. We are creating the exciting opportunity for you to leave your footprint.

midge medical is developing diagnostic devices based that are so easy to operate that they can be used by consumers as well as by health care professionals. The complete digitization of the test procedure is at the core of our vision. We believe testing should be available, accessible and affordable to all. With our aim for ubiquitous testing, we will create a healthier world, reduce infections and take the pressure off public medical resources.

You can contribute to our team as experienced Supplier Quality Engineer and be at the center of our bioware manufacturing activities.

As Supplier Quality Engineer you will

you are the link between midge medical and our suppliers in the areas of quality, engineering and production. Your tasks are

- Ensuring product quality and supporting the qualification of purchased parts in the areas of biochemistry upstream and downstream processing to final packaging
- Support of national and international suppliers in quality topics using tools like CAPA, APQP, FMEA, production process statistics etc.
- Support of the purchasing department in the nomination/qualification of suppliers
- Conducting/supporting supplier audits according to EN ISO 9001/13485
- Creation and implementation of test plans within the framework of supplier APQP
- Support in the processing of complaints within the scope of non-conformities (NC, field complaints)
- Internal contact person for supplier-related quality defects, complaints and approvals
- Contact person for the supplier regarding specifications, special releases, initial sampling (PPAP)
- Preparation of analyses, evaluations and reports

You will be a fit for this role if you

- Have previous experience in successfully working with suppliers in setting up and scaling manufacturing for biochemistry products
- Have practical insight into the biochemistry manufacturing market, ideally at a CDMO, or an appropriate machine supplier world
- Expertise in downstream processing of proteins including freeze drying would be beneficial
- Have first experience in building up and leading a team
- Like the combination of start-up spirit and fast scaling combined with the high quality standards and the regulatory environment of the diagnostics industry
- Like taking on challenges and create results
- Are a good communicator

Qualification

- Master's in biotechnology, Mechanical Engineering with focus biotechnology or relevant practical experience
- 5 years+ experience biochemical process optimization, scaling from small volume to production volumes
- Knowledge of packaging and sealing of biochemical products
- German and English language skills (C1 or higher)
